	biology dev	elonmental	biolo	or and a	ic cei	i cs with an em	phasis on	
	biology, developmental biology and genetics with an emphasis on			m-orientated				
	work organi	zed in the fo	n oc	of lecture		minars and exe	ercises in	
	order to deve	elon practica	al coi	mmunic	ation	skills and unde	erstanding of	
	fundamental biological processes as well as critical thinking base			king based on				
	acquired knowledge in modern biological science.							
Learning outcomes	General competences:							
(general and specific	1. Capacity for independent learning							
competences):	2. Development of communication skills							
- /	3. Capacity for critical questioning and scientific reasoning							
	4. Developm	ent of creati	ive tł	ninking			-	
	5. Ability to use information technology and adoption of new							
	information							
	6. Ability of teamwork - group work							
	7. Development of ethics and responsibility							
	Specific com	petences:						
	1. Remembe	ring the basi	ic str	ructure a	nd fu	nction of cells		
	(macromolecules, cytoskeleton, transport of macromolecules,					ules,		
	organelles, mitochondria and energy production, cell cycle, cell				le, cell			
	signaling and	naling and tumor biology)						

	2. Remembering the basics of molecular cell biology (cell genome,					
	replication and repair of DNA, transcription and RNA species,					
	regulation of transcription, RNA modification, translation, regulation					
	of translation, synthesis and modification of proteins, transport and					
	function of proteins)					
	3. Remembering the basics of developmental biology (fertilization,					
	meiosis, mitosis, stem cells and the molecular mechanisms of cell					
	differentiation)					
	4. Understanding the medical human genetics (basic principles of					
	genetic inheritance, sexual and autosomal inheritance, chromosome					
	aberrations, genetic counseling)					
Course content	During the course, knowledge of the students will be tested through					
(Syllabus):	seminars and exer	cises. Al	lso, acquired	l knowledge w	vill be verified	
	through weekly te	sts, held	every Mon	day, which wil	ll include material	
	from the previous week.

All nonitored and exercises), g 30% (or 30	

A student can achieve 70 points during lectures as follow:

Seminars: up to 5 points (5%)

Test 1: up to 13 points (13%)

Test 2: up to 13 points (13%)

Test 3: up to 13 points (13%)

Test 4: up to 13 points (13%)

Test 5: up to 13 points (13%)

During seminars and exercises, students will actively discuss the topic, which usually refers to lecture held by day before. The teacher evaluates the student's participation in the seminar (demonstrated knowledge, understanding, ability to define problems and reasoning). During each seminar and exercise students can achieve a maximum of 0.5 points. Altogether, through the all seminars and exercises students can achieve up to 5 points. Weekly tests are a mandatory part of the course and are held on Mondays. Test contains 30 questions related to the material from previous week. In order to pass the test, students must correctly answer more than 10 out of 30 questions (> 30%) of every weekly test. Correct answers are scored according to the following key:

26 - 30 = 13 points

21 - 25 = 11 points

- 15 20 = 9 points
- 10 14 = 7 points
 - <10 = 0 points

IMPORTANT!!!

• The passage of the weekly test is considered if a student achieves more than 10 points on the test!

• Students who do not pass one of five weekly tests cannot access to further weekly testing, but can access the examination periods as follows (see below) and should actively participate through course.

• Students who achieve \geq 40 points through class can take the final exam as indicated below in the section final exam. All those students who have \geq 65 points through class are exempt from written part of the final exam, meaning that an additional 15 points are automatically added to (maximal possible number of points on final exam), and they access only the oral part of the final exam.

• Students who achieve <40 points can take a final exam divided in two part, eg. more comprehensive written exam (test consisted from 100 questions) and oral examination ("classic mode" exam, see below).

• After successfully attended courses, students who achieve \geq 40 points can choose either the examination based on pointing system (points from class + weakly test scores) or the "classic mode" examination. In the later case the points gained through course are not calculated into final score. In the case that the option is "classic mode", students must inform the Head of the Department no later than 72 hours before than final exam starts.

The "**classic mode**" of final exam is combined by comprehensive test (100 questions) and oral exam. Final grade depends solely on the results from test and oral exam that are arithmetically combined.

• If a student achieves <60% on the "**classic mode**" written exam means that he failed the test and is not allowed to take the oral examination.

• All points scored thought course and written part of the final exam are valid until the

commission exam, when students take exam 4th time.

• The Commission's examination (4th time) consists of written (test of 100 questions) and oral exam. This applies to all students, regardless of scoring status through course! Passing threshold for the commission exam is 55%, whereas oral exam consist of "five oral exam questions" covering three areas of the course (two for general biology, two for molecular biology and one for genetics).

<u>Final exam</u>: (for those students who scored \geq 40 points through course)

The final exam consists of a written and oral examination. The total number of points scored on the final exam is 30 (written + oral), and to pass the exam it is required to achieve at least 8 points.

The written part of the final exam consists of test containing 50 questions, covering and integrating material from course. Grading is performed according to the following key:

 $48 - 50 = 15 \text{ points} \\ 45 - 47 = 14 \text{ points} \\ 42 - 44 = 13 \text{ points} \\ 39 - 41 = 12 \text{ points} \\ 36 - 38 = 11 \text{ points} \\ 32 - 35 = 10 \text{ points} \\ 29 - 31 = 9 \text{ points} \\ 25 - 28 = 8 \text{ points} \\ <25 = 0 \text{ points} \end{cases}$

The oral part of the final exam is mandatory for all students which have passed written part. Through written part students can score a maximum of 15 points. The minimum number of points to pass the oral exam is 8. Student, who scores 0-7 points, fails pass the exam, and testing must be repeated. The oral exam consists of "three oral exam questions" covering each out of three areas of the course (general biology, molecular biology and genetics). If student fails to respond sufficiently to any of those "oral exam questions" he cannot pass the oral exam.

The oral exam grading is estimated by the following key:

Excellent = 14 - 15 points

Very good = 12 - 13 points

Good = 9 - 11 points

Sufficient = 8 points

Insufficient = 0.7 points

IMPORTANT!!!

• All those students who do not pass final exam (<8 points) can re-access to the final exam at the next regular examination period under the same conditions.

• All students who chose "classic mode" of examination will take this mode every time following by regular examination periods.

• Once student pass the written exam, it is valid for the next examination periods!

• If students have scored 40 or more points and could not pass the final exam through regular examination periods, they will take a commission exam under conditions described above!

(Please see part *The Commission's examination*)

Final score:

The final grading is formed by the sum of whole points every students score through course and points obtained in the final exam (written and oral exam). Grading is performed according to the following key:

90 - 100 = excellent (5) 80 - 89 = very good (4) 68 - 79 = good (3)

56 - 67 =sufficient (2)

0 - 55 = inadequate (1)

Regardless of the points scored through course, final grade cannot be obtained if student was not positively evaluated on the final oral exam.

The "classical mode" of evaluation of the test:

90 - 100 = excellent (5) 80 - 89 = very good (4) 70 - 79 = good (3) 60 - 69 = sufficient (2) 0 - 59 = insufficient (1)

According to Commision's exam, final grade for the written part of the exam is performed according to the following key:

91 - 100% = 5 (excellent) 79 - 90% = 4 (very good) 67 - 78% = 3 (good)

55 - 66% = 2 (sufficient)

0 - 54% = 1 (insufficient)
